

Internship Defense

UX/UI Designer of a documentation Wiki

Company: Orange France

Student: Martin GADET

Supervisor: Frida CHODATON

02/03/2026 – 31/08/2026

1. Introduction & context
2. Design & implementation
 - 2.1. Brainstorming
 - 2.2. Paper prototype
 - 2.3. High-Fidelity prototype
3. User study & evaluation
4. Development of an MVP version
5. Difficulties encountered
6. Conclusion

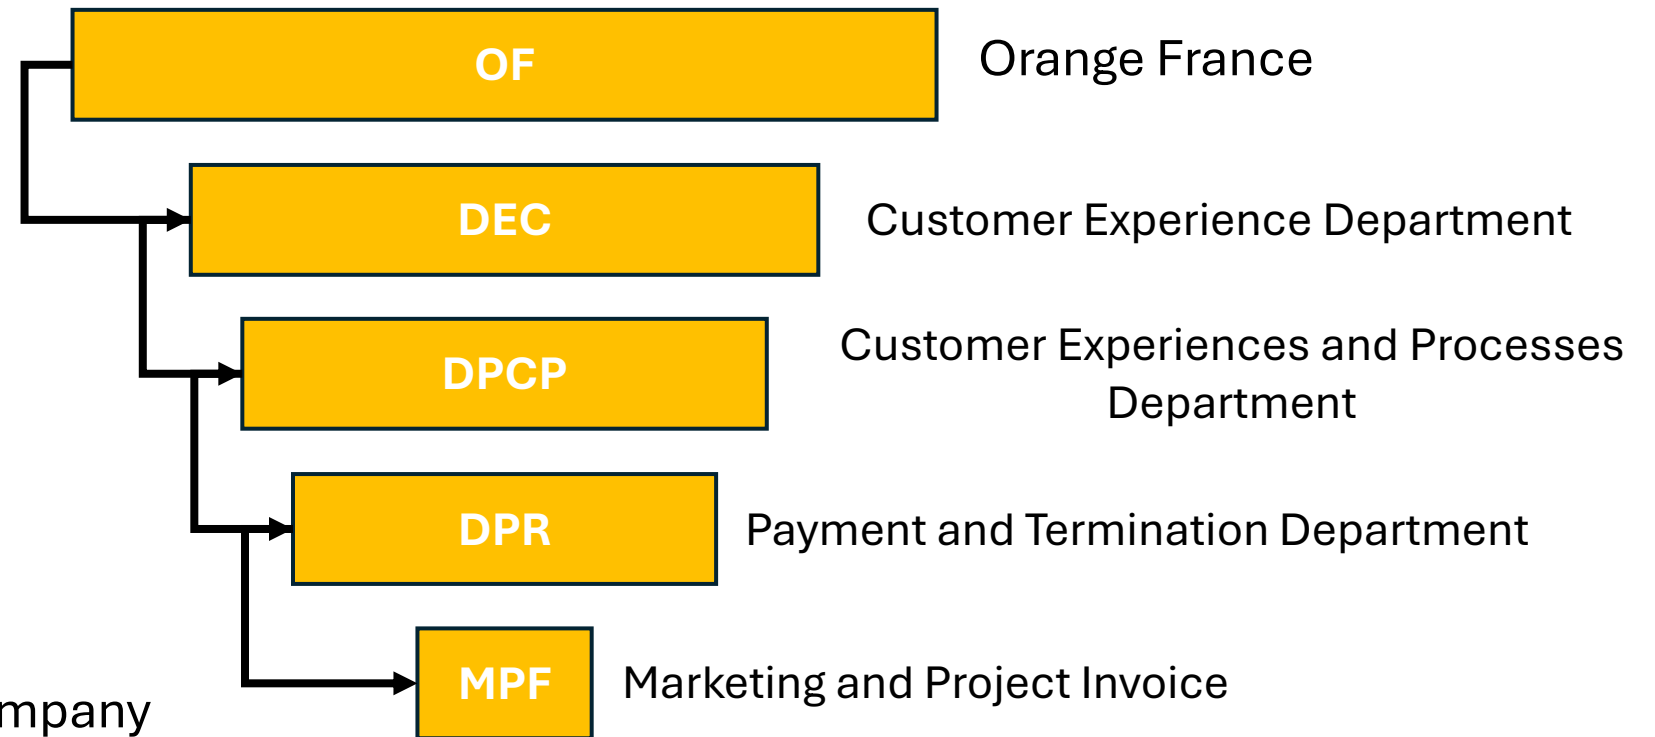

1. Introduction & context

French **telecommunication** company

Founded in **1994**

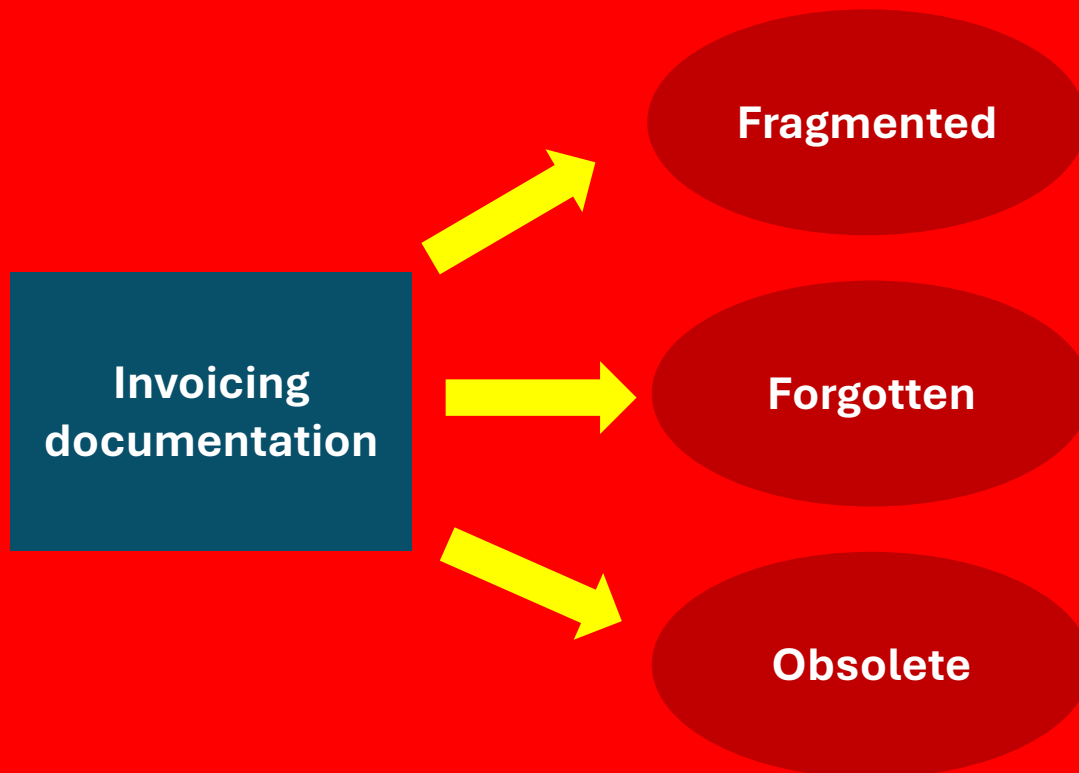

World's leading providers of Internet and communication services

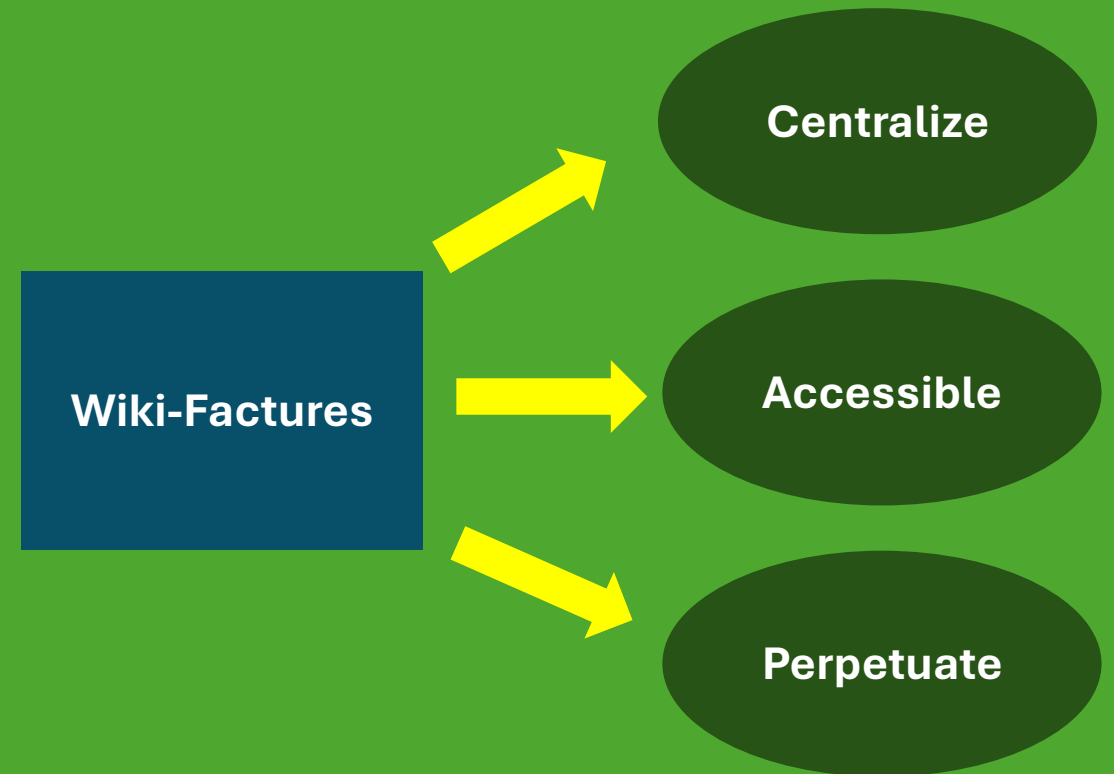

- Master **customer journeys and processes** related to invoicing
- Provide customers with a **correct, compliant** and **easily understandable invoice**.

1. Introduction & context

Issue

Solution

1. Introduction & context

Home

Subscription with router

Mobile

Mobile subscription
(4G, 5G)

Punctual

Occasional purchase of
phones and accessories
on the website

The invoices related to those universes are:

- Different in **form**
- Different in **content**
- Not created with the same **processes** and the **same applications of the Information System (IS)**

2. Design & implementation

How to design an intuitive and accessible document repository, allowing the MPF team to effectively control knowledge on invoicing, while facilitating the search and updating of information?

2. Design & implementation

The process includes:

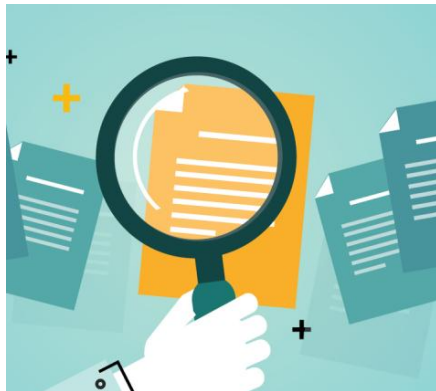

Brainstorming sessions

Paper prototype

High-fidelity prototype

Documentation of the prototype

Development of an MVP version

2.1. Brainstormings

Information content

The goal was to identify:

- The information that should appear
- The information to be excluded
- The level of precision to give to each information

Invoice composition

To determine a list of visual element to describe inside an invoice

Results:

approximately every element were interesting to describe, as long as we describe blocks of content and not each line

CSMART

FACTURE

Date: ____/____/____
Facture n°: ____

Vendeur: _____ Acheteur: _____
Nom: _____ Nom: _____
Adresse: _____ Adresse: _____
SIRET: _____
ICE: _____
Raison sociale: _____

REF PRODUIT	DESCRIPTION	QUANTITE	P.U HT	TOTAL

TOTAL HT: _____
TVA (X%): _____
REMISE: _____
TOTAL TTC: _____

Conditions de paiement: _____

Mentions spécifiques: _____

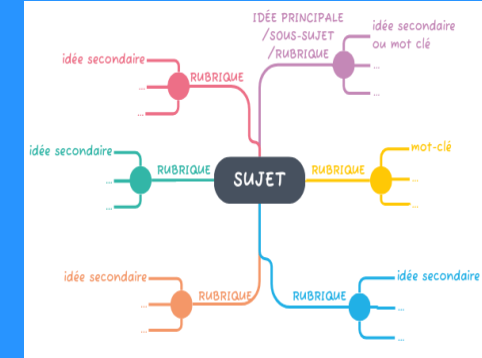

Merci pour votre confirmation.

Collective mind map

To give a first global vision of the wiki

Results:

- The need of history of changes
- Integration of data source from the IS
- The possibility to ask questions in case of missing information

Reverse brainstorming

To make a list of everything that should not be in the wiki

Results:

- The wiki should not be a catalog of offers and options
- The content should not be too specific or outdated
- Invoice elements that change too frequently should not be represented

Form, interface

The goal was to:

- Discuss collectively about the architecture, management, operation and visual aspects
- Generate as many ideas as possible about features, interfaces, and general operation

Debate on wiki management

To collectively answer questions about the architecture, management, operation of the wiki

Results:

- Integration of user roles with edit rights
- Non editor users to propose suggestions
- Notifications for each modification or publication

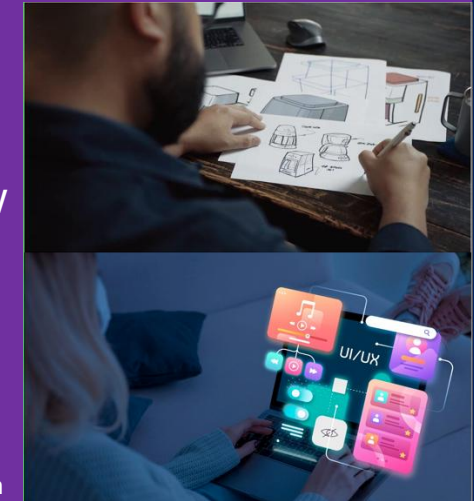

10x10 design sketches

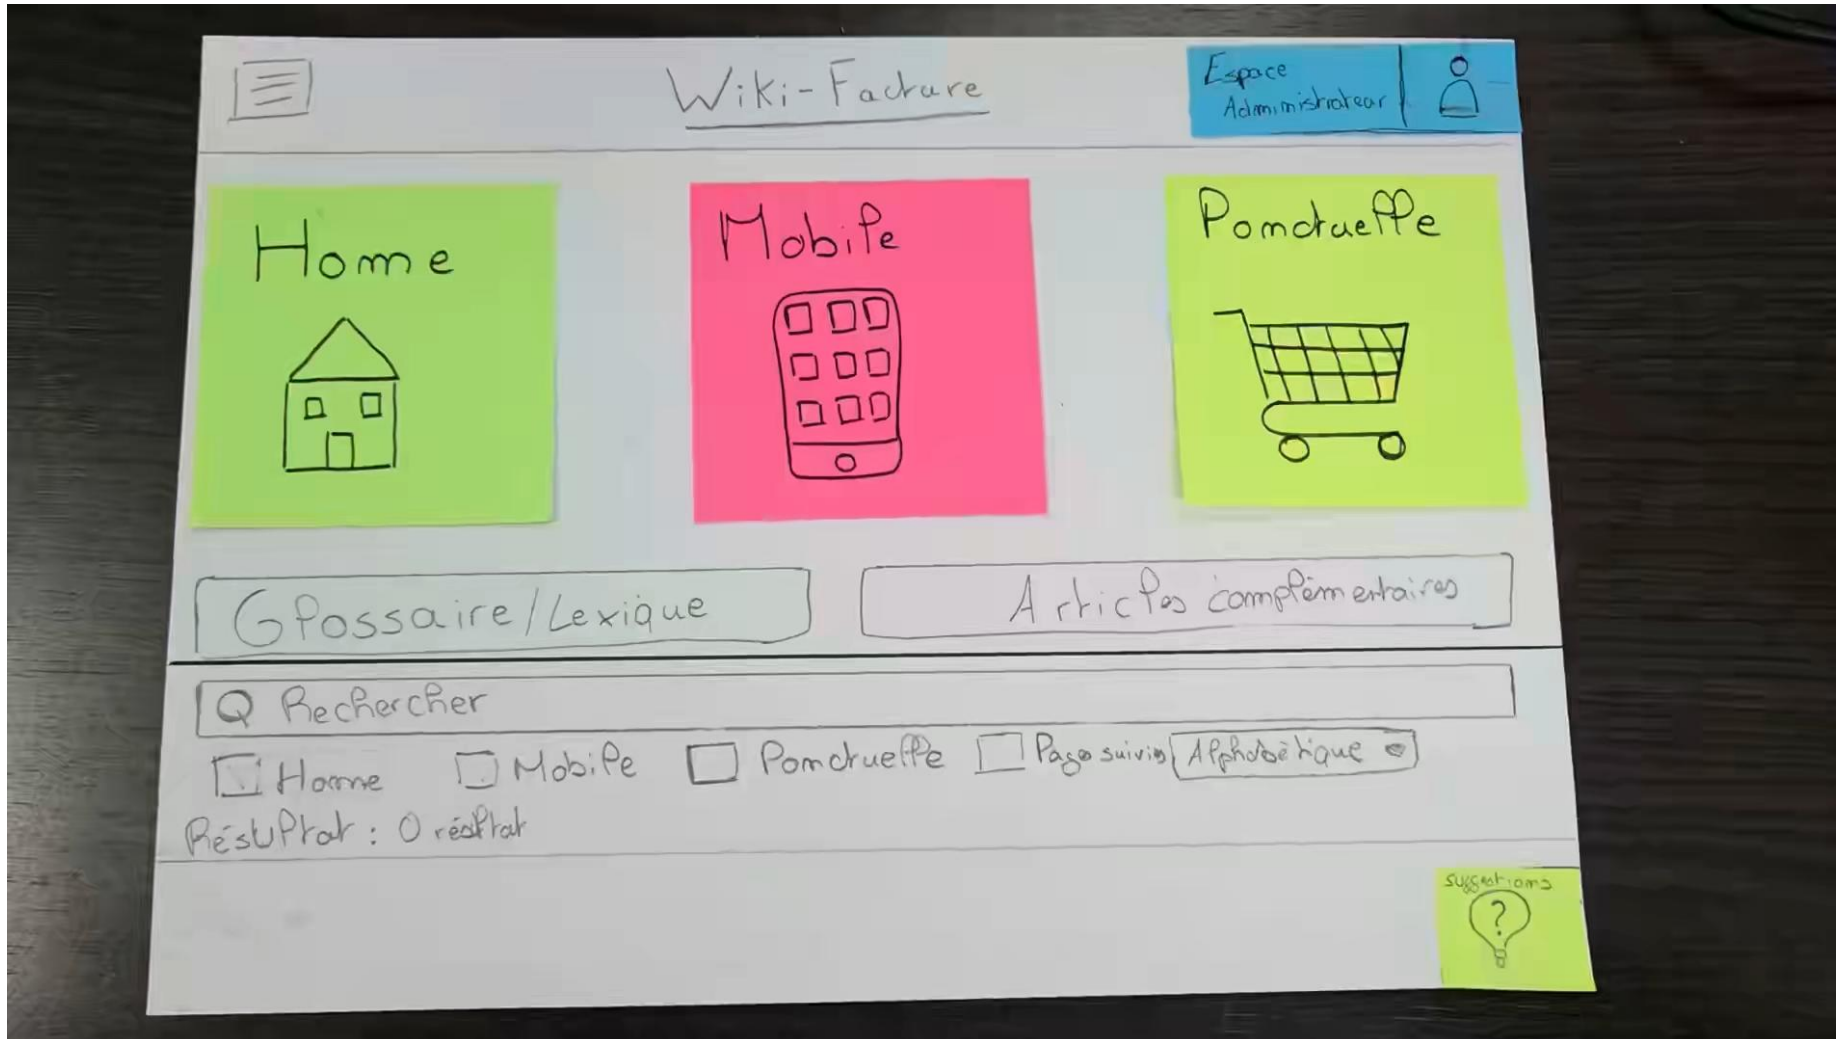

To generate as many ideas as possible and then select a few to explore further with variations

Results:

- Chatbot to assist users
- Interactive carousel to navigate between various invoices
- Invoice composition interface with an invoice image with clickable elements that show information

2.2. Paper prototype

The prototype was composed of:

- Home page
- Login form
- **Invoice composition**
- **IS diagram**
- Menus related to the different invoice universes
- **Complementary articles** page
- **Glossary**
- Edit page

2.2. Paper prototype

Evaluation of the prototype

3 sessions

3 participants of the MPF team

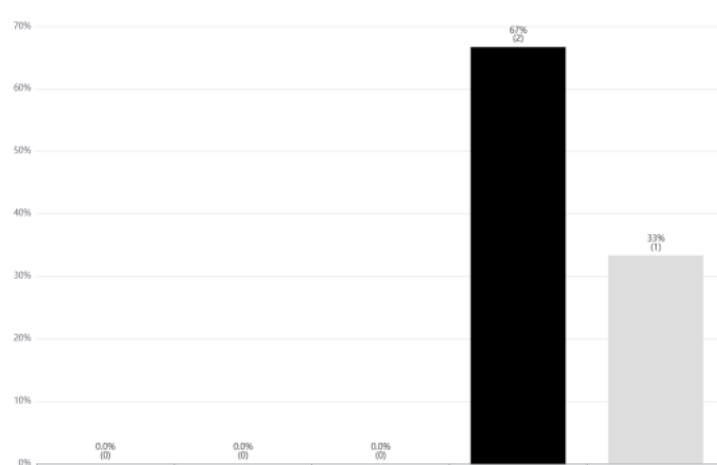

Composed of :

- List of task
- Questionnaire of 23 questions

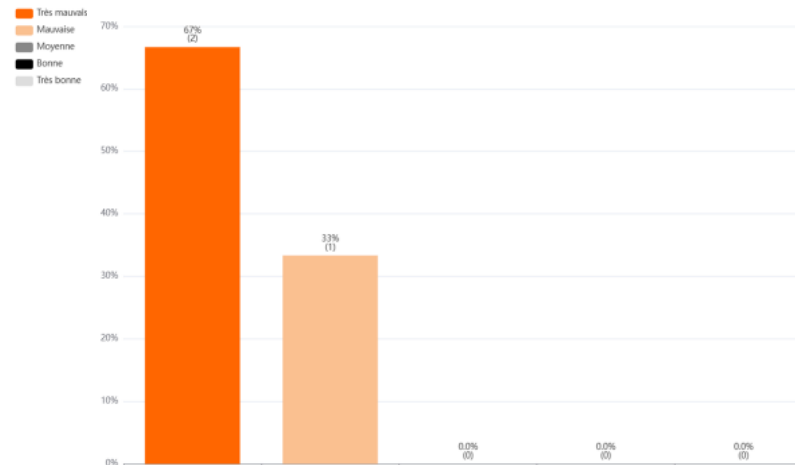

Results

Globalement, comment évalues-tu cette expérience avec le prototype ?

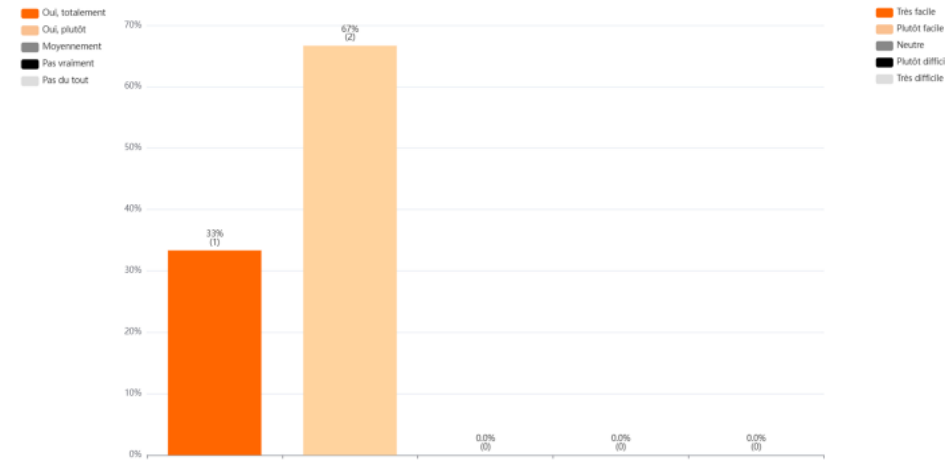

Experiment = “Good” or “Very Good”

Le parcours te semblait-il logique ?

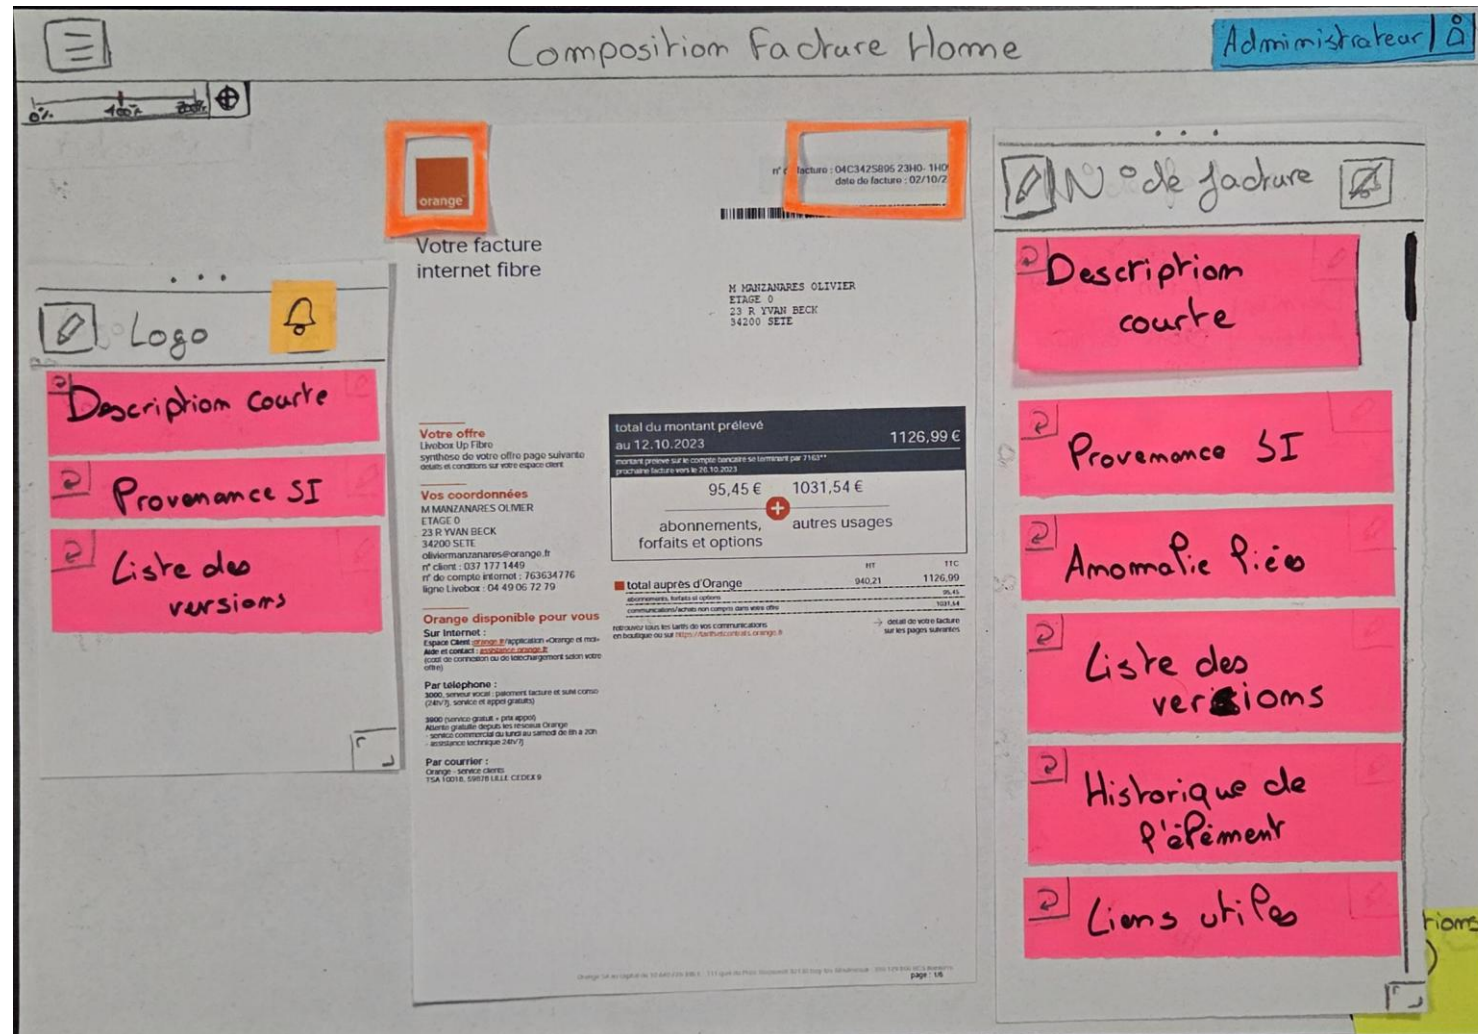

Navigation paths = easy and immediately understandable

As-tu trouvé l'utilisation du prototype facile ou difficile ?

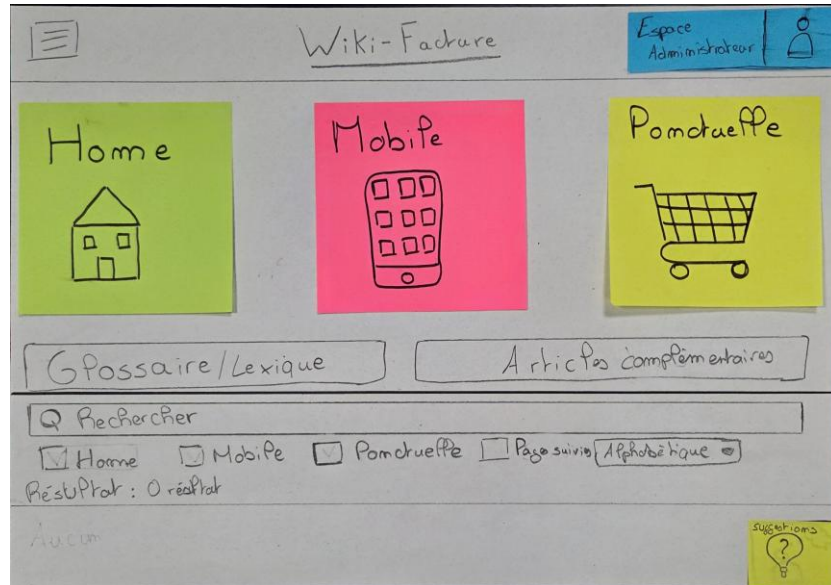

Prototype = very easy to use

Appreciated element

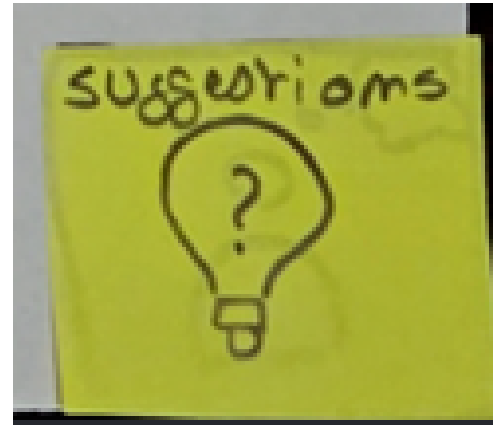

2.2. Paper prototype

Several improvements

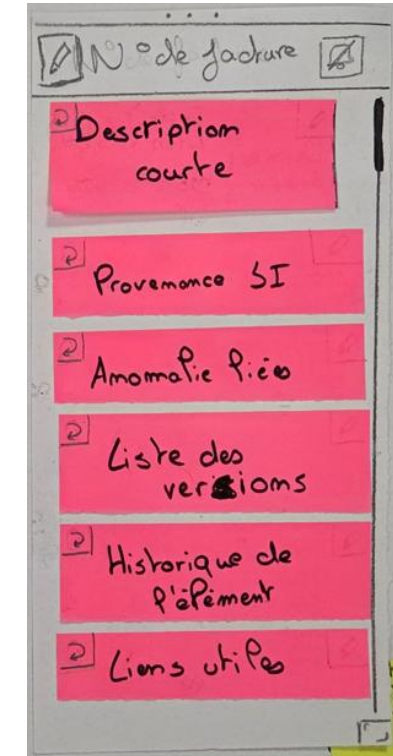

Better **separation** between the **buttons** and the **search bar**

Make the search bar **more visible**

Make the
« **Suggestions** » button
clearer

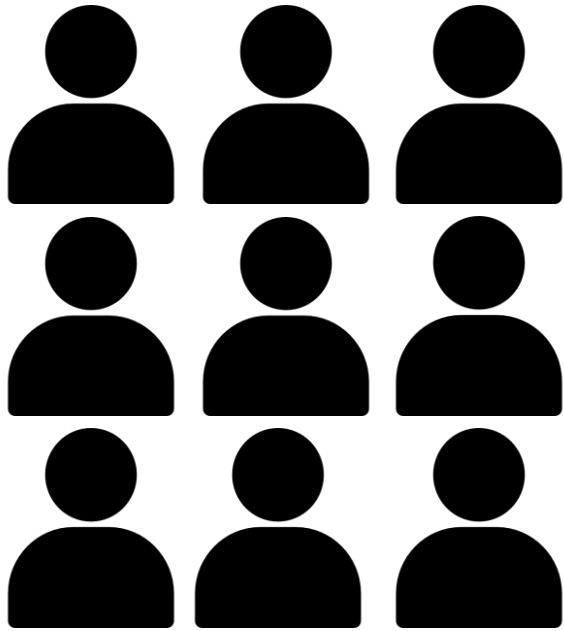

Increase the **intuitiveness** of the **card flipping** interaction

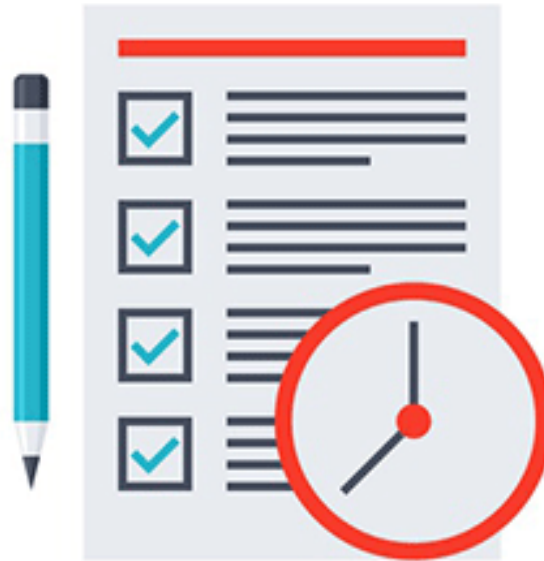

2.3. High-Fidelity prototype

3. User study & evaluation

9 participants of the DPR

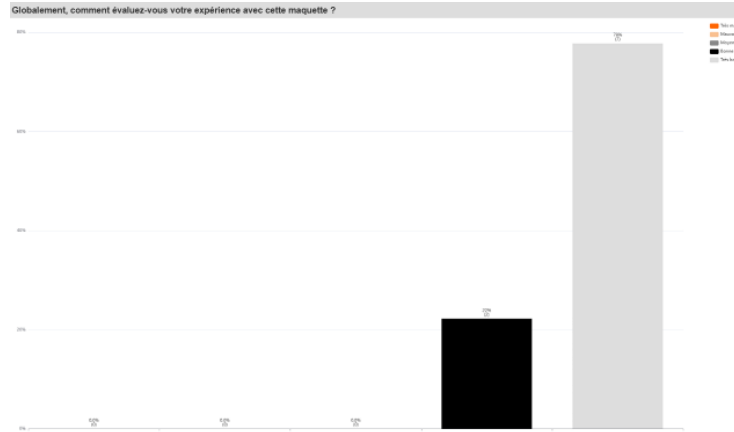

List of task

Questionnaire of 36
questions

3. User study & evaluation

Results

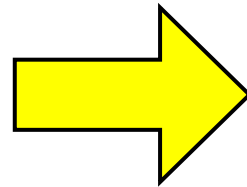

Overall feedback = very positive

Questionnaire responses

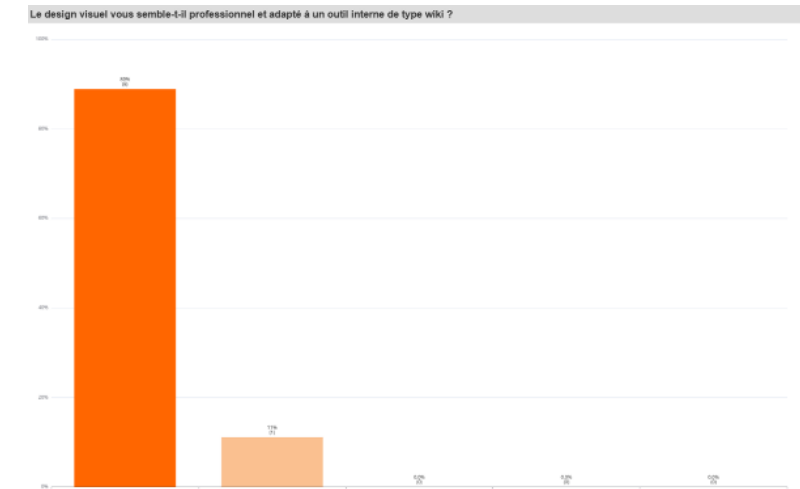

Interview transcripts

Participants' actions and errors

Interface = clear, intuitive,
educational and suitable for an
internal tool

Structure of the wiki = quickly
understood

Bloc paiement

Description courte
Le bloc paiement montre le montant total de la facture et l'éventuel solde comptable si celui-ci est non nul.

Provenance SI
02E

Description longue
Les informations du bloc de paiement dépendent du moyen de paiement, du montant et de la présence d'un solde comptable non nul.
Ce bloc paiement peut contenir :
• Libellé d'appel à paiement (varie selon le mode de paiement)
• Date de prélèvement automatique ou date butoir de règlement
• Total à payer (= montant de la facture + solde reporté)
• Total du montant TTC de la facture (si solde comptable non nul)
• Total du montant TTC du solde reporté (si solde comptable non nul)
• Montant HT et Montant TTC (pour les factures Pro)
• Détail sur le moyen de paiement (ou informations sur où trouver ce détail)
• Date de la prochaine facture
Il n'y a pas de report de solde sur les 1ères factures, à l'exception des 1ères factures issues d'une migration d'offre sans changer de n°

« This **interface** and **interaction** help **understanding** how the **invoice** and the **IS** works and allow to **access information** more **quickly** and avoiding having to go through long and heavy documents »

3. User study & evaluation

Concept or menus	Understanding
Interface	✓
Structure	✓
Interactive invoice composition	✓
IS diagram	✓
Contribution features	✓
Searching	✗ More important
Suggestion	✗ Better feedback system
Additional information at the back of the card	✗ Clearer interaction
Follow a page	✗ Terms clarification

Frustration due to **Figma**, unworking interaction and slowness

4. Development of an MVP version

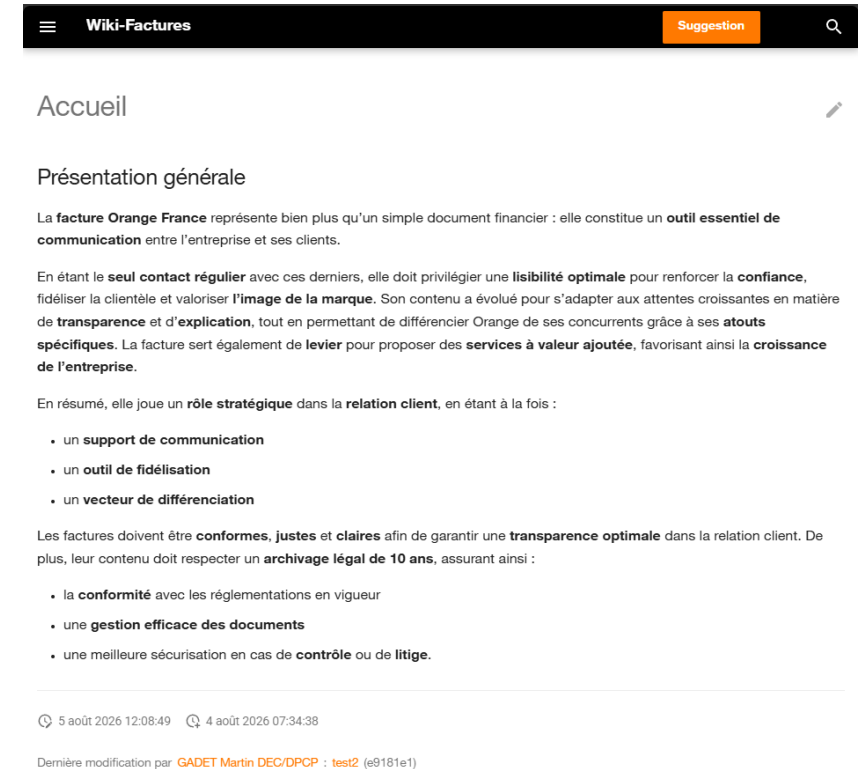

Developed with the static website generator MkDocs

6
7 ## Présentation générale
8
9 La facture Orange France représente bien plus qu'un simple document
financier : elle constitue un outil essentiel de communication entre
l'entreprise et ses clients.
10
11 En étant le seul contact régulier avec ces derniers, elle doit
privilégier une lisibilité optimale pour renforcer la confiance,
fidéliser la clientèle et valoriser l'image de la marque. Son contenu
a évolué pour s'adapter aux attentes croissantes en matière de
transparence et d'explication, tout en permettant de différencier
Orange de ses concurrents grâce à ses atouts spécifiques. La facture
sert également de levier pour proposer des services à valeur
ajoutée, favorisant ainsi la croissance de l'entreprise.
12
13 En résumé, elle joue un rôle stratégique dans la relation client,
en étant à la fois :
14
15 - un support de communication
16 - un outil de fidélisation
17 - un vecteur de différenciation
18
19 Les factures doivent être conformes, justes et claires afin
de garantir une transparence optimale dans la relation client. De
plus, leur contenu doit respecter un archivage légal de 10 ans,
assurant ainsi :
20
21 - la conformité avec les réglementations en vigueur
22 - une gestion efficace des documents
23 - une meilleure sécurisation en cas de contrôle ou de litige.
24
25 ---
```

Config file

Markdown files

HTML/CSS website

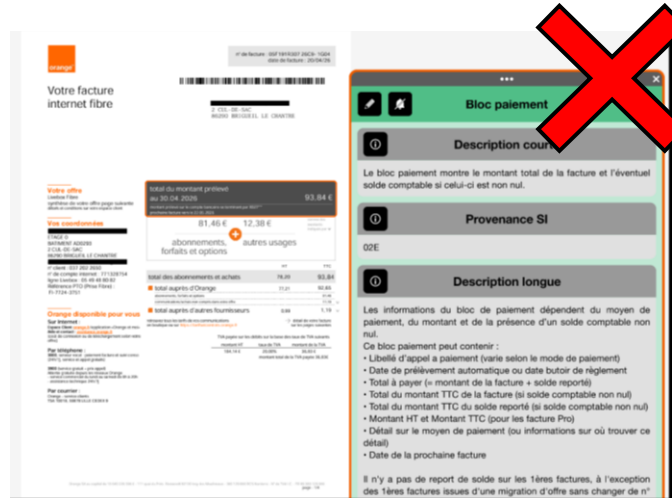

4. Development of an MVP version

Build and host in GitLab

Build, store, manage IT projects

Not everything is possible:

Handle the contribution features easily:

Suggestions = GitLab issues

Modification history = the commit list

User list = list of member of the GitLab repository

5. Difficulties encountered

Benchmark of prototyping app

Retool

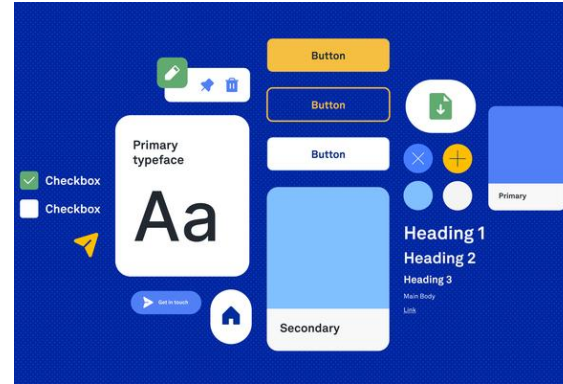

balsamiq

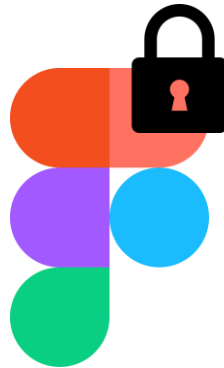

axure

Master Figma and the design system

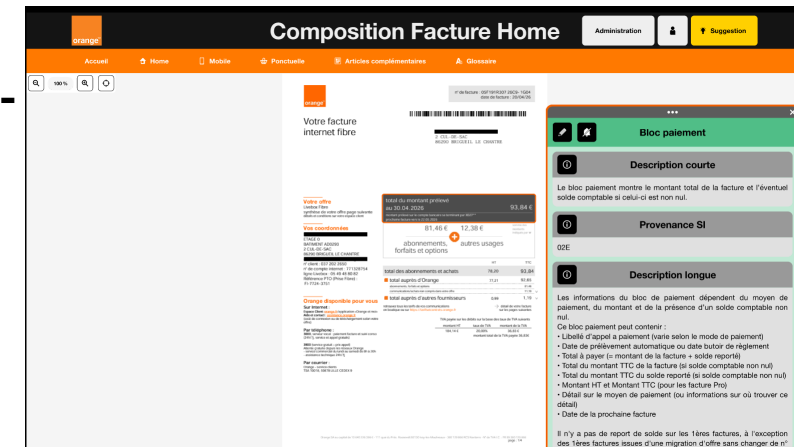

License and design system access

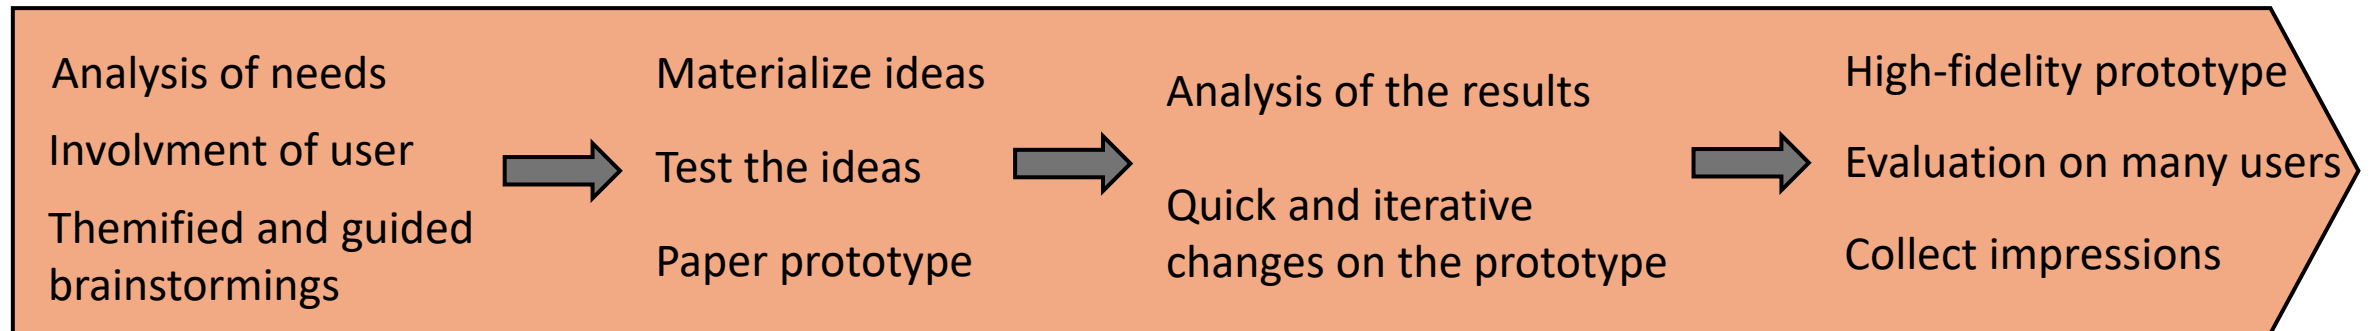

Difficulties to make the high-fidelity prototype the more close to the reality

Finding contacts

How to design an intuitive and accessible document repository, allowing the MPF team to effectively master knowledge on billing, while facilitating research and updating information?

Autonomy **Teamwork**

Methology **Curiosity** **Oral/Writing expression**

THANK YOU !
